RE: CONSTRUCTION NOISE MONITORING RESULTS - NEWCASTLE SANDS

This letter report presents the results of plant noise and operational noise compliance monitoring conducted for the Cabbage Tree Road Sand Quarry (CTSQ) at Cabbage Tree Road Williamtown during the period November 2019 – February 2020.

OPERATIONAL NOISE

Noise Limits

Operational noise limits for the quarry are contained in Condition 3, Schedule 3 of Development Consent SSD-6125 issued on 9 May 2018:

Noise Impact Assessment Criteria

The Applicant must ensure that the noise generated by the development does not exceed the criteria in Table 2 at any residence on privately-owned land.

Table 2: Noise criteria dB(A)

Receiver	Day L _{Aeq (15} minute)	Shoulder L _{Aeq (15} minute)	Shoulder L _{Amax (1} minute)
Any residence on privately owned land	43	39	45

In this condition, 'the development' excludes road construction activities associated with the intersection of the quarry access road and Cabbage Tree Road and vegetation clearing operations within the Southern Resource Area (see condition 4 below).

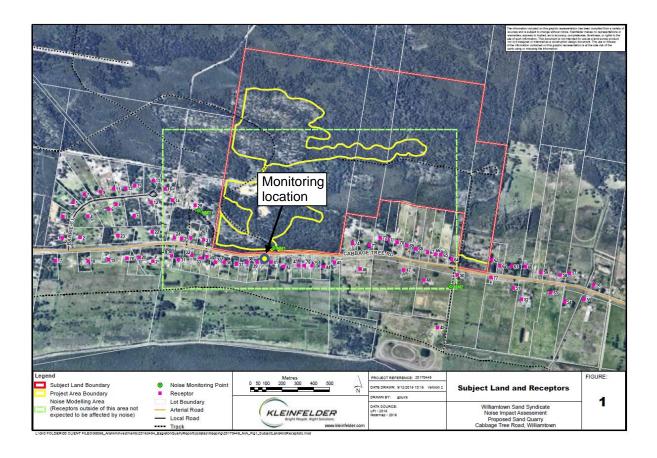

Noise generated by the development is to be measured in accordance with the relevant requirements and exemptions (including certain meteorological conditions) of the NPI. Appendix 5 sets out the meteorological conditions under which these criteria apply and the requirements for evaluating compliance with these criteria.

The criteria in Table 2 do not apply if the Applicant has an agreement with relevant landowner/s to exceed the noise criteria, and the Applicant has advised the Department in writing of the terms of this agreement.

Monitoring Locations

Noise monitoring was conducted in the front yard of the residence identified as R40 in **Figure 1**. This location is representative of the potentially worst impacted residences from constructions activities near the site entrance.

Noise Monitoring Procedure

Noise emission levels were measured with a Brüel & Kjær Type 2250 Precision Sound Analyser. This instrument has Type 1 characteristics as defined in AS1259-1982 "Sound Level Meters". Calibration of the instrument was confirmed with a Brüel & Kjær Type 4231 Sound Level Calibrator prior to and at the completion of measurements. A calibration certificate is attached to this report.

Operating conditions

Operation conditions and site activities during the noise surveys have been provided by the operator as follows:

23/11/2019

Water cart in use.

18/12/2019

- Placing Signs and Posts on Cabbage Tree Road.
- Placing concrete barriers on Cabbage Tree Road.

22/01/2020

- Box out subgrade CH 630-530.
- Completing water main testing.

12/02/2020

- Place DGB 20 on intersection.
- Box out retaining wall footing.

Measured Noise Levels

Table 1 shows summarises the measured noise levels and contributing noise sources.

Table 1. CTSQ Construction Noise Monitoring Results						
Location	Date	Time	dB(A), Leq	CTSQ Contribution dB(A), Leq	Criterion dB(A) Leq	Identified Noise Sources
R40	23/11/19	1:04 pm	59	35	43	Traffic (59), CTSQ (35)
R40	18/12/19	12:30 pm	61	25	43	Traffic (61), wind (41), CTSQ (25)
R40	22/01/20	1:31 PM	62	30	43	Traffic (62), wind (41), CTSQ (30)
R40	12/02/20	10:34 AM	68	<30	43	Traffic (68), CTSQ (<30)

Noise emission attributed to CTSQ were due to reverse alarms on mobile plant with some contribution from engine revs. The results in Table 1 demonstrate compliance with the noise emission criterion.

I trust this report fulfils your requirements at this time, however, should you require additional information or assistance please contact the undersigned on 4954 2276.

Yours faithfully,

CALIBRATION CONDITIONS:

Preconditioning:

4 hours at 23 °C

Environment conditions:

see actual values in Environmental conditions sections

SPECIFICATIONS:

The Sound Level Meter has been calibrated in accordance with the requirements as specified in IEC61672-1:2013 class 1. Procedures from IEC 61672-3:2013 were used to perform the periodic tests.

PROCEDURE:

The measurements have been performed with the assistance of Brüel & Kjær Sound Level Meter Calibration System B&K 3630 with application software type 7763 (version 7.2 - DB: 7.20) and test procedure 2250-4189.

RESULTS:

Initial calibration	Calibration prior to repair/adjustment
Calibration without repair/adjustment	Calibration after repair/adjustment

The reported expanded uncertainty is based on the standard uncertainty multiplied by a coverage factor k=2 providing a level of confidence of approximately 95 %. The uncertainty evaluation has been carried out in accordance with EA-4/02 from elements originating from the standards, calibration method, effect of environmental conditions and any short time contribution from the device under calibration.
